

DETEX BLOX is a non-toxic, highly palatable bait for monitoring rodent activity.

Each DETEX BLOX weighs 20 grams.

DIRECTIONS FOR USE:

DETEX BLOX may be used in and around homes, industrial, commercial, public and agricultural buildings. Place near likely locations of rodent entry, and in areas that provide rodent harbourage. May also be used in transport vehicles (ships, trains, aircraft) and in and around related port or terminal buildings. May also be used in alleys.

DETEX BLOX, although non-toxic, should be placed in bait stations or otherwise secured out of reach of non-target animals. This will help to ensure that the DETEX BLOX are only being eaten by rodents and acclimate rodents to feeding in that location.

Rats: Place 3 to 6 DETEX BLOX every 30 - 50 feet (9 - 15m).

Mice: Place 1 to 2 DETEX BLOX every 6 - 14 feet (2 - 4m).

Inspect bait at least monthly for rodent activity. Replace spoiled bait immediately. If the bait has been gnawed or eaten, replace DETEX BLOX with toxic bait, in accordance to that product's label, or traps, as appropriate, until the infestation has been controlled.

DETEX BLOX is non-toxic and may be disposed of by placing in trash, at an approved waste disposal facility or by incineration, in accordance with local waste disposal regulations. If burned stay out of smoke. Call your Local Waste Agency for any questions on proper disposal.
